

Innovation in Construction

Who We Are

MTX are a UK construction and engineering company primarily focusing on projects within the healthcare sector.

Operating throughout the UK we consistently promote the use of modern method of construction (MMC), offering offsite modular buildings, refurbishment and remodelling of existing facilities in addition to turnkey construction.

Our team have extensive knowledge of constructing environments which require a high level of mechanical and electrical engineering co-ordination. We are proud to have gained an enviable reputation for our commitment to consistently meet customer expectations, in terms of safety, programme, budget, design and quality.

Working Safely

We are committed to maintaining our excellent health and safety record. Striving to be accident and incident free is one of our key goals.

Throughout our business there is a clear commitment to developing a proactive safety culture through appropriate specialist training.

Supported by recognised health and safety professionals we set clear targets and objectives to ensure that high standards of health and safety are integrated into everything we do.

Sustainability

The forward thinking approach of our team extends to the environment. The construction of energy efficient buildings and environmentally friendly construction techniques is a fundamental part of our business.

We are committed to ensuring our clients meet their sustainability challenges by providing support and advice from consulting and planning, design and construction through to post contract maintenance and support.

Off-Site Modular Construction

The MTX modular building solution allows us to meet our clients exact requirements without the compromises often associated with modular construction.

Our system offers extensive flexibility which allows for complete architectural freedom offering:

- A design life of up to 60 years
- Unlimited internal and external architectural licences
- Solid concrete floors
- Clear span modules maximising usable floor space
- Tailored environmental design

Refurbishment and Remodelling

Working in busy healthcare environments requires a careful and considerate approach.

We have extensive experience refurbishing and remodelling healthcare buildings, ensuring disruption to adjacent departments is minimised and high quality finishes achieved.

We have multiple reference sites where we have successfully refurbished busy operating theatre and ward departments.

Traditional Construction

We offer the turn-key construction of traditional buildings.

Our primary delivery strategy promotes the design for manufacture process which allows us to maximise the amount of work completed off-site, minimising on-site disruption and creating significant benefits to programme.

We have forged strong relationships with industry renowned architects and engineers that we work with to provide single source projects, procured and delivered in a minimal time frame.

Procurement

MTX are pre-qualified and have secured positions on several government frameworks.

The framework agreements for modular buildings are available to public sector organisations and are fully OJEU compliant procurement routes.

What our clients said:

“The scheme was delivered both on time and within budget with thoroughly professional managers and site management. The Project Team worked with the Trust throughout the design and construction period. Every effort was made to minimise disruption on the day to day operations of the hospital and there was excellent management and collaboration during the construction phase. This included close liaison with 2 live surgical wards above and a main outpatient department below as the works involved major disruption to both these services.

The MTX personnel were professional, knowledgeable and extremely competent; they dealt with a breadth of people onsite with courtesy at all times and were a delight to work with. The Trust is exceedingly pleased with the quality of the new unit and hopes to replicate it on further refurbishment projects.”

Patsy Tobin – Lead Commissioning and Clinical Planning Manager
Property and Estates Developments for Central Manchester
University Hospitals NHS Foundation Trust

“MTX delivered a great building and enabled the Trust to make use of 63 beds within 11 months. The facility is sandwiched between a 24 hour A&E department and theatre complex and works were undertaken around such crucial clinical services, it really demonstrates careful logistical planning and commitment by the team which was most reassuring.”

Muhammad Syed – Head of Capital Projects
for London North West Healthcare NHS Trust
